We also find that the yield of the block plants as in nearly every instance been more than double that of the unblocked ones. The results obtained for the past 3 years are in my opinion easily explained. Any gardener at all familiar with the business will readily understand that a plant with a chunk of dirt 5 inches square filled with a mass of fine hair roots ready to go to work as soon as set in the field will easily out-grow and out-yield a plant that has been dug or pulled out with but a few roots and which is compelled to begin life all over again before it can get down to its life task of producing fruit, I am sending you a report of the tomato demonstration on my farm this year...
