Now the extent to which such problems can be satisfactorily essayed depends upon the mathematical development of the form of transition adopted, and the facility with which this development admits utilisation in the field - the effective compromise of mathematical truth with practical precision. Hence, besides fulfilling its objective function, the ideal transition curve must be easy and flexible in construction; a curve with simple, definite relations to main curves and straights; and, above all, one which can be introduced without the aid of special tables, such as hamper the construction of American tabular spirals. The curve most readily amenable to these requirements is to be found in the clothoid = m the spiral advanced and investigated in this connection by Mr....
